Problem Statement Release

Problem Statements

This year, teams will choose between 3 problem statements...

- **Each one tackles a real-world problem.**
- **Each one presents a unique challenge.**
- **Choose the one that best fits your team's strengths and interests.**

Mission: Digital Shield

Topic: Online Harms

Problem Statement: Design a web application that helps young Singaporeans actively fight online manipulation (e.g. misinformation, fraud, cyberbullying, etc.), and build a more informed and caring online community.

Elaboration: Every day, your feed floods with memes, trending posts, and viral clips – but not everything you see online is true. Fake news, edited videos, and scam messages can quietly shape what people believe. Instead of being easy targets, how can your solution turn Singaporeans into online protectors who can counter misinformation? Think of tools that teach fact-checking, encourage reporting, or promote kindness and trust online.

Mission: Service Edge

Topic: National Service (NS) Experience

Problem Statement: Design a web application that enhances the NS experience by making key moments more engaging and supportive (e.g. Anytime-Anywhere IPPT, real-time situational awareness in an ICT, streamlining field-pack verification in a Mobilisation, etc.)

Elaboration: National Service (NS) is a rite of passage for many young Singaporeans, shaping discipline, fitness, and teamwork. Yet, the journey can be challenging, with demanding physical tests and packed schedules. Whether helping trainees track fitness progress, offering motivation, or providing easy access to resources and advices, your project could enhance wellbeing, confidence, and camaraderie among NS Men and Women preparing for or currently completing their service.

Mission: Quick Aid

Topic: Fast Response

Problem Statement: Build a web application that gathers information from different sources to help Singapore respond faster and smarter during disasters or health emergencies.

Elaboration: When crises like pandemics or floods happen, quick and clear information can save lives. What if we could track cases, hospital beds, or volunteer efforts all in one place? Your challenge is to design an app that brings together data from many sources to help leaders, responders, and communities make quick, confident decisions when it matters most.

Reminder! Qualifier Submission Deadline

Deadline: 12:00 noon, 21 May 2026

Submission: tk.sg/codeexp26_qualifiers

Submission requirements:

No
coding
required!

1. Proposal (Value proposition slide deck, no more than 15 slides)
2. Elevator Pitch (1-minute video)
3. Wireframe
4. Architecture

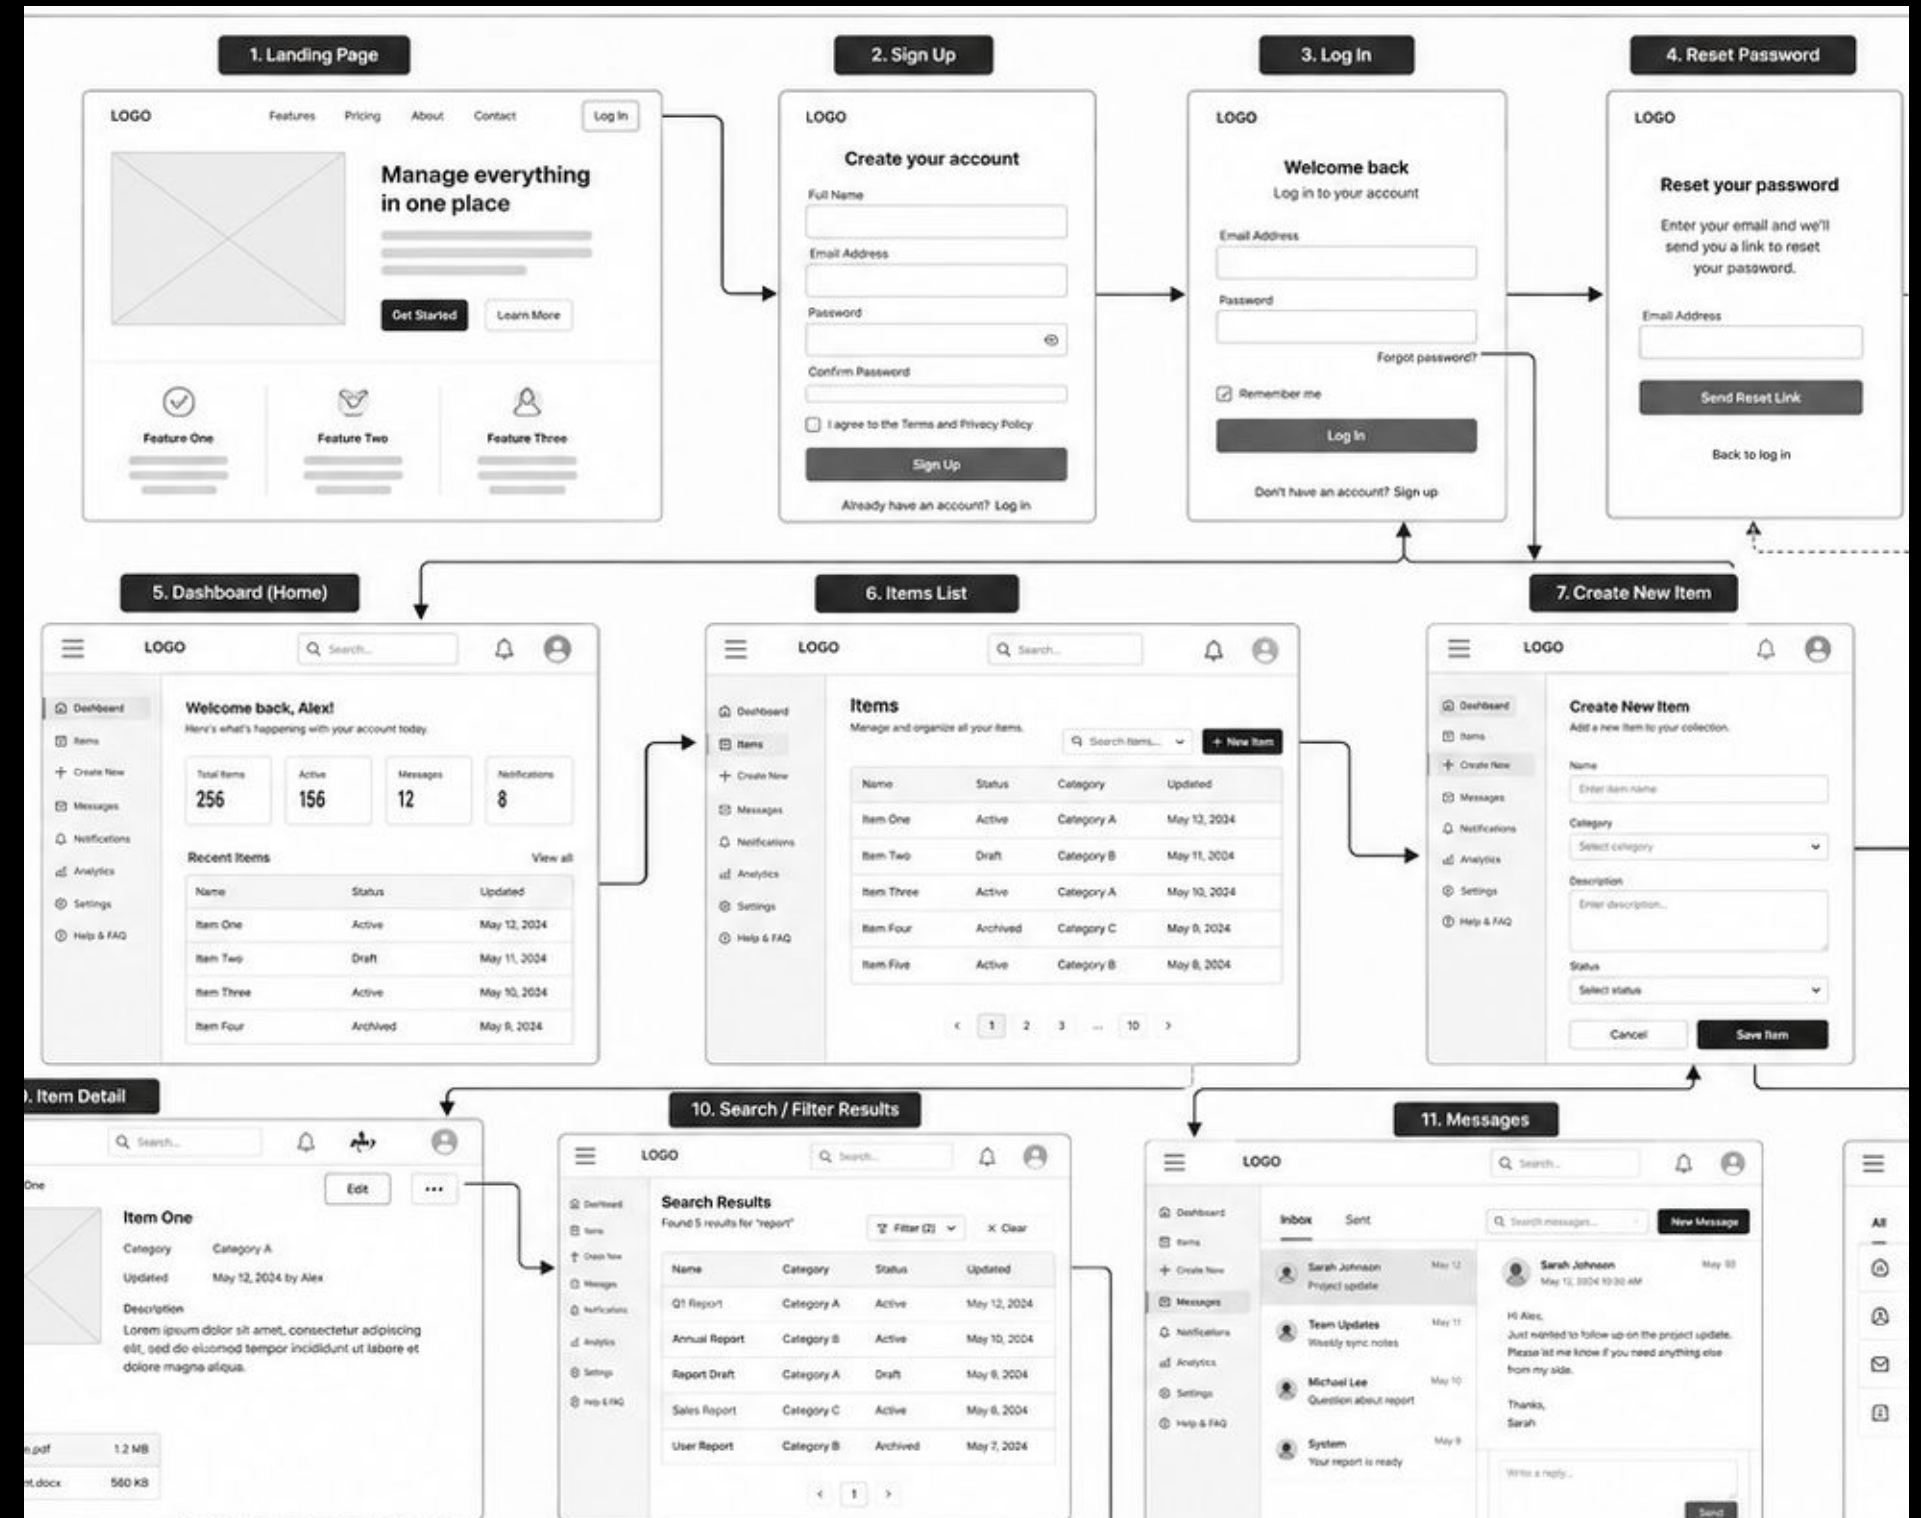

Qualifiers – Submitting your Wireframe

To include:

1. App screens
2. Flow between screens
3. Description and comments

Note: you must present your wireframe during your pitch!

Format: Image file or URL
(e.g. link to Figma wireframe)

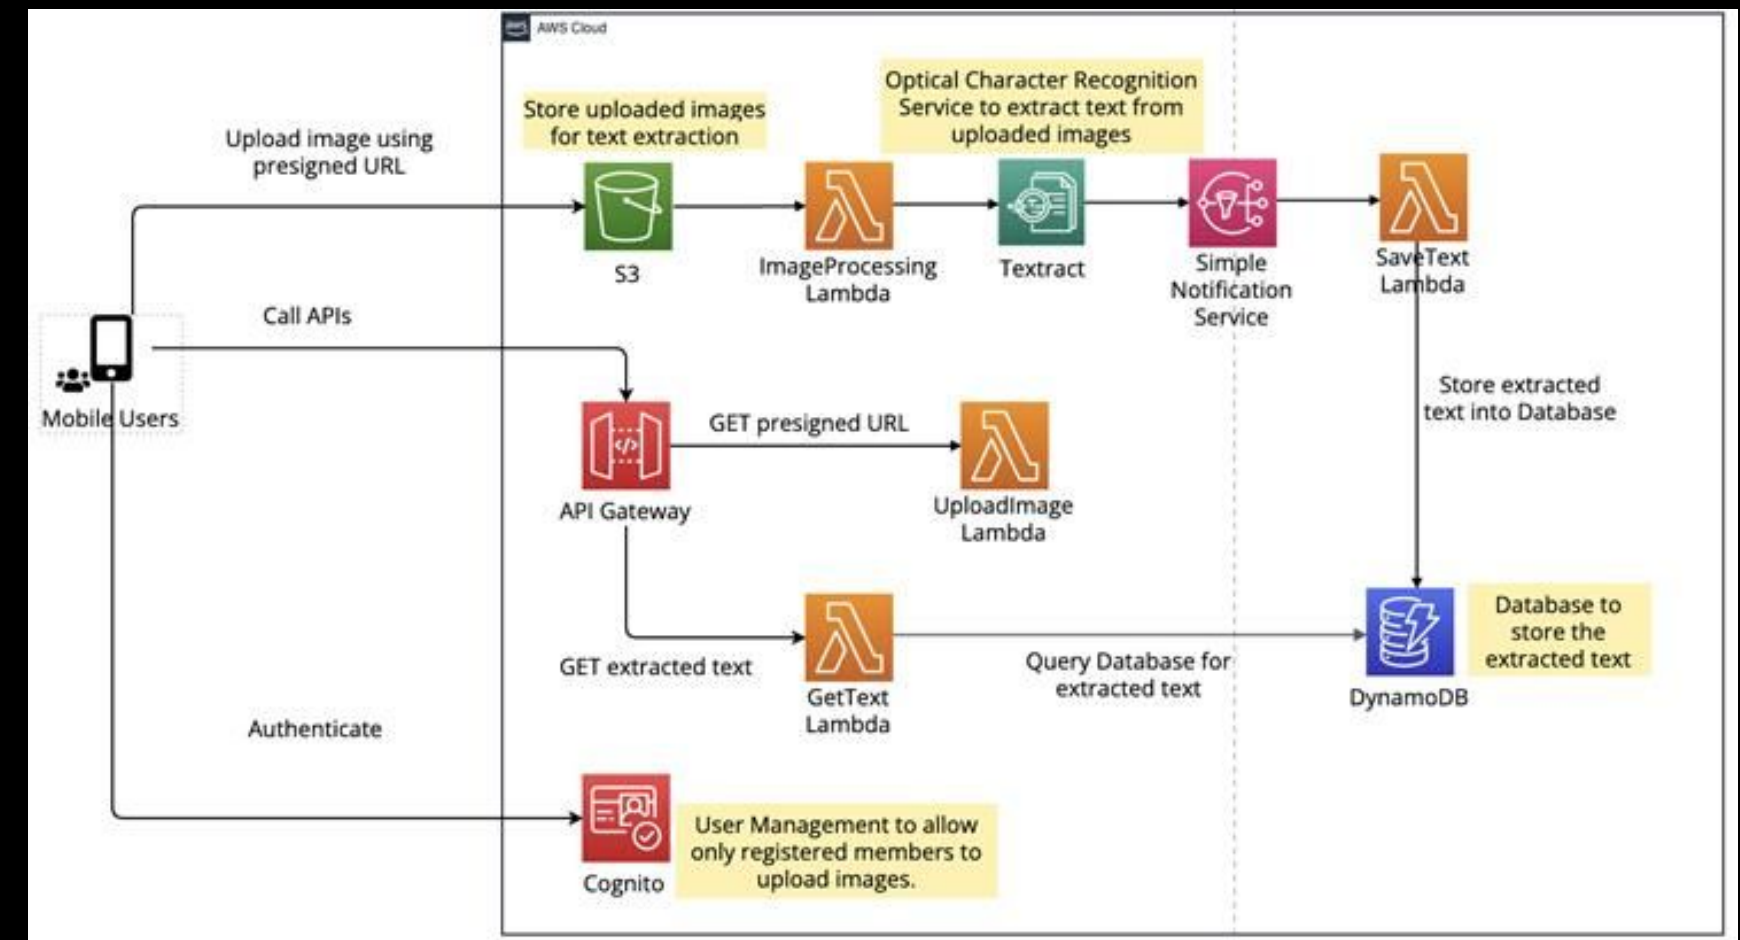

Qualifiers – Submitting your Architecture

To include:

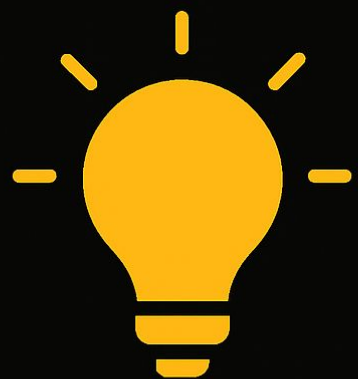

1. Infrastructure
 - Network
 - Compute
 - Storage
2. Connections between components
3. Comments to describe the components

Note: Please include your architecture as a slide in your presentation.

Format: Image File

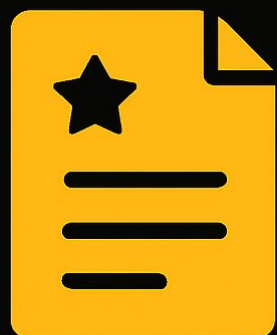

Qualifiers - Evaluation Criteria

1. Relevance

- Clearly address the problem statement

2. Originality

- Novel and original proposal

3. Feasibility

- Logical and well-structured implementation plan

Thank You!

And good luck with your submissions! 🦵🚀
